

## Presentation

### What is your site about and what was the motivation to create it?

My project is a yacht information and retailer website. I show to do this topic because I really like boats and in the future would consider selling being part of a company that sells similar boats. The company name is Tandet which is my dad's middle name. I chose this name because my dad loves boats and boating.

### How is your site structured/ what are the different pages?

I have my home page and the other 5 pages are difference boats "for sale" with information for a potential buyer

### What JavaScript/JQuery libraries are being used here and would you recommend using it for future projects

I used a tilted page jQuery for the home page. On each of the other pages a slide show plug in is used. The media jQuery I used was for the header to instead of being a stretched menu to belong a drop down menu when the website is viewed at a certain size. I Liked the look of all these things and would use again.

### Show site responsiveness (links, drop down menu,)

### What are your future project plans/next steps to take for your web project if any?

I plan to put this project along with all my others in my resume to show that I understand coding to an extent.
